-----------------------------------	---

ACUTE TOXICITY DATA: *The following toxicity data are derived from the mixture.*

Parameter	Result	Comments
Acute Oral (LD₅₀)	879.2 mg/kg	ATE – Category 4
Acute Dermal (LD₅₀)	6365.6 mg/kg	ATE – Above the cut-off for the highest classification
Acute Inhalation (LC₅₀)	~60 mg/L	ATE – Above the cut-off for the highest classification
Ocular Irritant	2A	ATE – based on the percentage of each ingredient and their corresponding irritation score
Dermal Irritant	3	ATE – based on the percentage of each ingredient and their corresponding irritation score
Dermal Sensitizer	NE	

NE = Not Established, ATE = Acute Toxicity Estimate

The following toxicity data are derived from the ingredients of the mixture, and are considered relevant to the final mixture.

CARCINOGENICITY:	At high doses, NMP has caused liver tumors in mice. These results are not considered relevant to humans given the negative results in other test systems and the high doses required to produce effects in mice. Based on the results from a number of long-term carcinogenicity studies and short term tests, there is no indication that NMP itself is carcinogenic. None of the remaining ingredients in the mixture are considered to be carcinogenic.
MUTAGENICITY:	None of the ingredients in the mixture are considered to be mutagenic.
REPRODUCTIVE EFFECTS:	None of the ingredients in the mixture are considered to be reproductive toxins.
TERATOGENICITY/ DEVELOPMENTAL EFFECTS:	NMP may adversely affect the developing fetus based on animal data. None of the remaining ingredients in the mixture are considered to be teratogenic or developmental toxins.
SPECIFIC TARGET ORGAN TOXICITY – SINGLE EXPOSURE:	Based on the concentration of eprinomectin in the mixture, the specific target organ toxicity – single exposure classification is a Category 2. Animal studies and human pharmacovigilance reports identify eprinomectin as a neurotoxicant. Signs and symptoms include: in-coordination, drowsiness, depressed motor activity, slowed breathing, dilation of the pupils, tremors, vomiting, anorexia, muscle tremors, headache and dizziness.
SPECIFIC TARGET ORGAN TOXICITY – REPEATED EXPOSURE:	Based on the concentration of eprinomectin in the mixture, the specific target organ toxicity – repeated exposure classification is a Category 1. Animal studies and human pharmacovigilance reports identify eprinomectin as a neurotoxicant. Signs and symptoms include: in-coordination, drowsiness, depressed motor activity, slowed breathing, dilation of the pupils, tremors, vomiting, anorexia, muscle tremors, headache and dizziness.
INTERACTIONS WITH OTHER CHEMICALS WHICH ENHANCE TOXICITY:	None known

12. ECOLOGICAL INFORMATION

The following toxicity data are derived from the ingredients of the mixture, and are considered relevant to the mixture.

TOXICITY:	LC ₅₀ /EC ₅₀ for the various ingredients ranged from 0.000025 to >5000 mg/L for freshwater fish, invertebrates and plants. Based on test results for the most sensitive species (freshwater invertebrates) and mathematical modeling, the mixture is considered a Category 1 Acute Aquatic Hazard (GHS standards).
------------------	--

PERSISTENCE AND DEGRADABILITY:	Based upon biodegradation testing, computer modeling and physico-chemical characteristics of the ingredients in the mixture, the mixture is considered inherently biodegradable in the environment.
BIOACCUMULATION POTENTIAL:	Based on the K_{ow} of the ingredients in the mixture, some of the ingredients have the potential for bioaccumulation. However, fugacity modeling and biodegradation testing suggest that the potential for bioaccumulation of those ingredients is low. Therefore, it is considered that the mixture will not persist in the environment.
MOBILITY IN SOIL:	Based on the K_{oc} of the ingredients in the mixture and fugacity modeling, the mixture is not considered to have a high probability of mobility through the soil.

13. DISPOSAL CONSIDERATIONS

Responsibility for proper waste disposal is with the owner of the waste. Dispose of all waste mixtures and containers in accordance with national, regional, state and local regulations.

SPECIAL PRECAUTIONS:	As the active ingredient is highly toxic to aquatic organisms, great care is needed to ensure that the product does not reach a drain, waterway or unpaved soil.
METHOD OF DISPOSAL:	<p>Triple or (preferably) pressure-rinse the empty container. Dispose of waste product/rinsate in a disposal pit specifically marked and set up for this purpose clear of waterways, vegetation and roots. Return clean container for recycling where this is an option or for disposal at a landfill authorized to accept that waste. If neither of these options is available, bury the container below 500 mm in the disposal pit. Empty containers should not be burned. Contaminated water can be treated by activated carbon absorption.</p> <p>For the disposal of the clean-up materials from a significant spill consult waste authority regarding disposal.</p>
