## 12. ECOLOGICAL INFORMATION

**TOXICITY:** Based upon computer modeling, Afoxolaner is considered toxic to

highly toxic to aquatic organisms. The  $LC_{50}/EC_{50}$  ranged from 0.008 to 1.046 mg/L for freshwater and marine fish, invertebrates and plants. Based on computer modeling, the mixture is considered a Category 1 Acute Aquatic Hazard (GHS standards). However, due to limited quantities (i.e., packaging) the mixture is

not considered an environmental hazard.

PERSISTENCE AND DEGRADABILITY:

Based upon computer modeling and physico-chemical characteristics of the ingredients in the mixture, the mixture is

considered biodegradable in the environment.

BIOACCUMULATION POTENTIAL:

Based on the  $K_{\text{ow}}$  of the ingredients in the mixture, some of the ingredients have the potential for bioaccumulation. However, fugacity modeling and biodegradation testing suggest that the potential for bioaccumulation of those ingredients is low. Therefore, it is considered that the mixture will not accumulate in

the environment.

**MOBILITY IN SOIL:** Based on the  $K_{oc}$  of the ingredients in the mixture and fugacity

modeling, the mixture is not considered to have a high probability

of mobility through the soil.

13. DISPOSAL CONSIDERATIONS

Responsibility for proper waste disposal is with the owner of the waste.

Dispose of all waste ingredient and containers in accordance with national, regional, state and local regulations.
